

2 Stage Flowstep™ Ceramic Valve

All Cascade mixers are fitted with our premium German made ceramic cartridges that feature smooth action and our special Flowstep™ 2 stage action. This provides practical water saving by creating a tactile half open position.

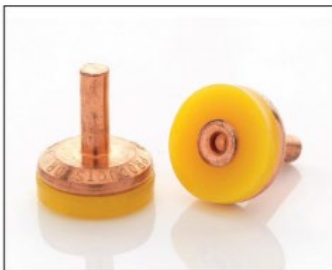

Robust Brass accessory mount

Cascade bathroom accessories will never wobble or work loose thanks to the innovative mounting system. The solid brass forged mount block fixes to the wall with 3 stainless steel screws. The flange is forged with lugs that locate into the mount plate for exceptional stability.

Ceramic lever tapware valve

The Cascade lever style tapware features German made ceramic ¼ turn valve cartridges providing silky smooth and light action, providing many years of life with no maintenance.

Copper Jumpers

The cross handled jumper taps use valves featuring tough Australian made copper jumpers fitted with durable polyurethane washers for extra long life and ease of action.

New solid brass Indicators

A new upgrade means that Cascade tapware is now fitted with solid brass indicator buttons with the classic "H" and "C" markings milled in. This allows us to coordinate the indicator colour finish.

Flow softening aerators

Cascade basin and sink taps and mixers are fitted with flow regulating and flow softening aerators. This German made Neoperl® device provides accurate flow regulation and comfortable flow.
