

2 Stage Flowstep™ cartridge

We use the legendary 2 stage Flowstep™ valves on Pegasi mixers. These cartridges, made in Germany, represent the pinnacle of quality and technology. The 2 stage system provides practical water saving functionality by creating a tactile half open position.

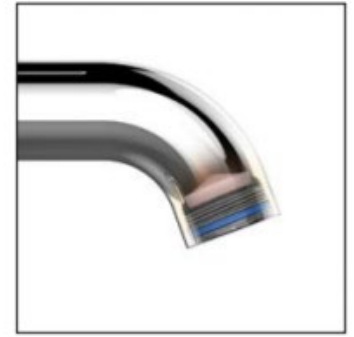

Solid Brass construction

Pegasi mixers are made from solid brass. Using Brass instead of zinc or plastic makes Pegasi very durable and allows us to produce these products in a range of finishes. Even the handles are forged brass and feature Faucet Strommen's signature milled markings.

Smartbridge™ in-wall body

Our unique new Smartbridge™ system is a feat of engineering. This breeching system built using stainless steel and brass takes the hassle out of plumbing in our wall backplate Pegasi mixers and provides a fast, sturdy set up for the perfect fit off.

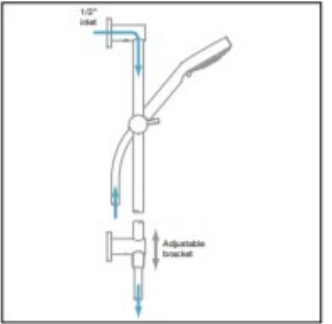

Recessed Aerators

The new Pegasi M series mixers and outlets feature recessed aerators. This eliminates unsightly joints on the end of the spout and provides a clean appearance. Basin and sink spouts are fitted with flow softening aerators. Bath spouts come with flow straightener inserts.

Rotaclick™ Slide bracket

Pegasi Slide & dual showers feature solid brass slide brackets fitted with the industry leading Rotaclick™ angle adjustment system. This mechanism uses ball bearings and a dimpled stainless disc to provide tactile, effortless adjustment of the hand shower angle.

Inflow™ Rail system

The architectural inflow rail, thanks to integrated water flow, is a favourite for modern bathrooms. Water enters the top bracket and flows through the rail eliminating the need for a separate water supply elbow. Slide showers with the traditional elbow set up are also available.

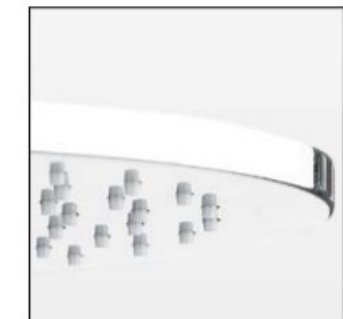

Slimline handshower

This sleek round handshower provides excellent performance and looks the part in modern showers. The slimline has a 100mm round face and features a slide selector to switch between spray and pulsating massage functions.

Micro handshower

The micro handshower is specially designed for performance. Despite a tight package, it has been engineered with precisely angled nozzles and provides a strong and well directed spray. Although machined from solid brass, the Micro is light to handle.

Brass Case Shower heads

Pegasi overhead showers are made using solid brass casings. The generous 250mm round heads are standard on Pegasi and provide a full drenching shower. Other sizes are also available. Brass case showers are superior in quality and finish and allow us to offer a range of finishes.

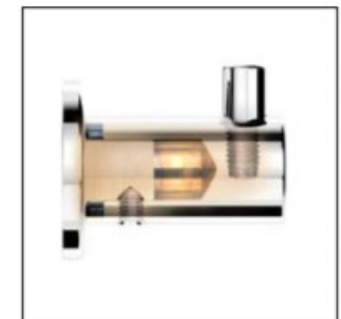

Ceramic dual shower diverter

Pegasi dual showers use a smooth ceramic disc diverter valve to switch water flow between overhead and handshower operation. This diverter is housed in a sleek upper bracket.

Snug fitting towel rails

The strong tubes used on Pegasi towel rails are fitted with nylon end plugs incorporating o-rings to make for a snug fit to the end brackets. This eliminates rattles and squeaks whilst maintaining the ease of cutting the rails to custom length.

Robust brass accessory mount

Pegasi Bathroom accessories fit to the wall with this sturdy mount system. Forged and machined from solid brass, this bracket screws to the wall with stainless steel screws and incorporates a mount lug with locating hole to ensure a rock solid mount that won't loosen or wobble.
