

The best shower every day

The generous Cascade overhead shower sports a classic bell contour of quality pressed brass. Water flows through an internal distributor cartridge and sprays from silicone nozzles providing an excellent spray pattern and preventing lime scale build up.

Effective hand shower spray

This beautiful brass handshower of a clean and classical design can be easily activated via the diverter switch on the dual shower. A specially designed nozzle array provides a strong and effective spray.

Easy to use ceramic disc diverter knob

The Cascade dual shower uses a smooth, light action ceramic disc diverter valve to switch water flow from the overhead shower to the hand shower.

Ball bearing Rotaclick™ angle adjustment

The solid brass slide bracket is fitted with our legendary Rotaclick™ mechanism. This uses ball bearings and a dimpled stainless steel disc to provide tactile and effortless adjustment of the hand shower angle and to ensure that the hand shower will never droop.
