

## Features

### Tough Engineered Stone

Silkstone is made from an advanced, mineral rich engineered stone of immense strength & purity. Unique mechanical properties and superior performance make it the best material for crafting the world's finest baths.

### Renewable Silky Finish

Being free of any decorative surface layers, what you see on the outside is what it is inside, perfectly smooth crafted white Silkstone. Being perfectly homogenous, and small marks or scratches from wear over time can be easily buffed out and the surface made to look brand new again.

### Dual Wall Design for Comfort

The designers have developed the unique dual wall architecture. This means that the interior of the bath can be comfortably contoured whilst the outside can be stylishly shaped. This not only makes for a much more ergonomic bathing experience, but also provides extra insulation reducing heat loss so keeping your bath water warm for longer.

### Strong Support Chassis

To provide even sturdy support for these baths and to ensure even weight distribution, each bath comes with an integrated welded aluminium chassis with adjustable feet. Of course all hidden from view underneath the stylish bath.

### Built in Overflow

Silkstone baths all come with discreet built-in overflow. A neat machined slot allows overflow water to drain through a sealed tube hidden in the dual wall cavity. This means there are no external pipes or fittings that would spoil the clean design.

### White Silkstone waste

All Silkstone baths are fitted with this beautiful pop up white silkstone waste. The absence of any visible chrome of metal means that Silkstone baths can be easily coordinated with taps of any colour.

### Delivering the Perfect Bath

For your peace of mind, our baths are delivered in a protective plywood crate on a strong timber pallet so they arrive in pristine condition.
