

Features

Inflow Slide shower System

Like the Pegasi slide showers, Zeos features the nifty inflow system. This means that instead of the traditional separate elbow for the water supply, the water actually enters the top bracket and flows through the rail making for a cleaner design.

Click Action slide bracket

Zeos Slide Showers feature the same click action slide mechanism as found on Pegasi slide showers. This slide mechanism is the best in the industry and features an ingenious click action angle adjustment via a stainless steel disc and ball bearing set up. This eliminates drooping or seizing and means that the adjustments of your slide shower will always be positive and easy.

3 Function sleek handshower

For Zeos we have a stunning new handshower. This sleek head gives a strong, effective shower spray for everyday showering and also features soft foam and massage functions.

Brass case shower heads with internal distributor

The stylish soft square Zeos overhead showers can be wall or ceiling mount and feature a high quality brass cased shower head that is 217mm across. An internal distributor body and fine silicone nozzles make this shower a high performer and easy to clean.

Smooth Anti-tangle hose

Zeos Slide showers are supplied with a smooth satin silver hose that is flexible and easy to clean. This prevents soap scum build up and in built anti-tangle swivel makes for easy use.
